Matching-type questions for a Quiz  
Randomized Questions and Choices

D. P. Story

## 1. Introduction

This article is a continuation of [qz-matching.pdf](#), in which the questions and choices have a “hard-wired” order. In this article, the same quiz is used as in [qz-matching.pdf](#), but the questions and choices are randomized.

For the labels to be brought up to date, first freeze the randomization by specifying `\useThisSeed{init-seed}`, then compile at least twice more. Refer to the preamble of this source file to see the use of `\useThisSeed`.

## 2. A quiz with randomized questions and choices

Match the last name of the U.S. President with his first name in the right most two columns. Each problem is worth 2 points.

- |    |            |           |              |
|----|------------|-----------|--------------|
| 1. | Jefferson  | A. Samuel | D. Benjamin  |
| 2. | Adams      | B. Thomas | E. Alexander |
| 3. | Washington | C. John   | F. George    |
